

Report of a Guest Lecture on the topic Natural Disaster Management

Mr. Anil Dandekar Ex. Principal MIT School Kothrud delivered a talk on the topic Natural Disaster Management on 9th Jan 2016.

He said that the Tsunami struck the Indian Ocean on 26th December 2004. The Tsunami was originated at Sumatra Island and it reached to the southern parts of India. The height of tide was 70 feet and its speed of 700km/hr. so the tides were very dangerous which killed thousands of people all over world. Especially countries like Thailand and Indonesia were badly affected. It also badly struck the Andaman and Nicobar Island. At the end, he said that our Indian scientists have developed highly advanced technology to predict about the changes in the sea which gives information to the Indian satellites and within 20 minutes, the information will be available to the district commissioner by which the life of Indian people can be saved.

While concluding the function Prof. Shivaji Mane shared his experiences of Tsunami rehabilitation camp held at Kochi in the year 2004.

Miss. Priya Sandbhor anchored the Function, Prof. Shivaji Mane proposed vote of thanks.

Glimpses of the Event
